Rear lighting on the 2010 Mustang sports car is a modern, all-plastic execution of the classic Ford designs of the '60s, coupled with the reliability of LED lighting and the benefits of lightweight, break-resistant all-plastic lamps. The fully serviceable lamps feature high-definition graphics optimized through the use of computer simulation, use of optical-grade acrylic, and precision-molding technology, delivering a design that harkens back to the '67MY Cougar® sedan and '68MY Shelby® Mustang® sports car.
